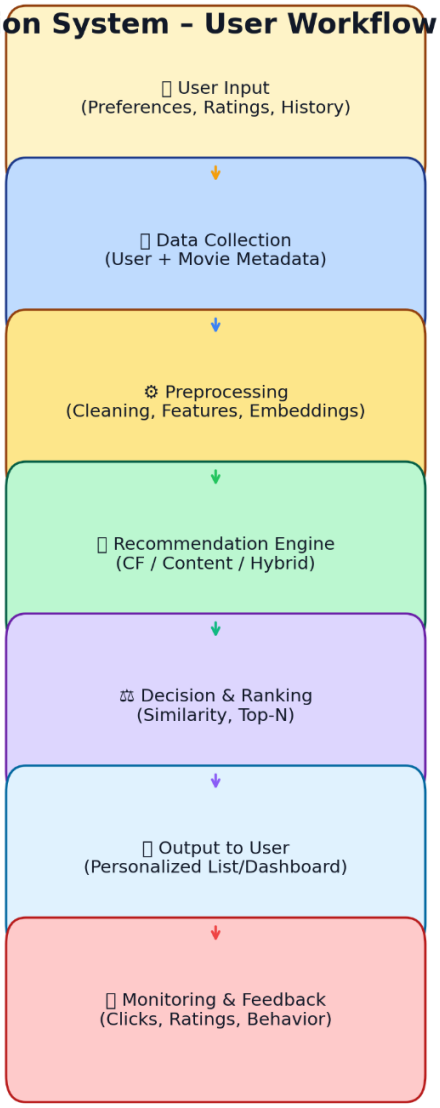
USER WORKFLOW (MOVIE RECOMMENDATION SYSTEM)

1. **User Input**
    - User logs in and provides preferences (genre, ratings, watch history).
2. **Data Collection**
    - System gathers user data + movie metadata (genres, ratings, popularity, tags).
3. **Preprocessing**
    - Clean & normalize data (feature engineering, filtering, embeddings).
4. **Recommendation Engine**
    - ML/AI models (Collaborative Filtering, Content-based, Hybrid).
    - Calculate similarity scores.
5. **Decision & Ranking**
    - Sort movies by relevance (Top-N recommendations).
6. **Output to User**
    - Display personalized movie list/dashboard.
7. **Monitoring & Feedback**
    - Track clicks, ratings, watch behavior to improve model.

Movie Recommendation System – User Workflow (Vertical Infographic)



Installations:

Using “ pip ” command

Pip install flask

Pip install flask-cors

requirements.txt

movierecomendationsystem > backend > requirements.txt

```
Flask==3.0.3
Flask-CORS==4.0.1
python-dotenv==1.0.1
```

```
npm install
added 16 packages
eslint@ 8.39,0: The flat rule is deprecated
 osdeFlatConfig is now available
added 243 packages
changed 9 packages
audited 259 packages in 6.507s
96 packages are looking for funding
run `npm fund' for details
13 moderate severrity vulnerabilities
run `npm audit fix
run npm auudit for details, run details
```
