How to clone the project from Git to Repos

- Go to Google and search for **Khada-Suryakiran cogniflow git**.
- Click on the first link with the name **Khada-Suryakiran**.
- On the GitHub page, click the **Code** button.
- In the pop-up window, select **Download ZIP** and extract it.
- Open the extracted folder. In the navigation bar, type cmd — this will open Command Prompt in the current folder path.
- Run the following commands to check if Python and pip are installed:
    - python --version
    - pip --version
- If installed, it will show their versions.
- If not, download Python from python.org.
- Run this command to install all required libraries from requirements.txt:
    - pip install -r requirements.txt
- This will take a few minutes to install all dependencies.
- After installation, type the following command to open the project in VS Code:
    - code .
- Open the **.env** file in VS Code.
- You need two API keys: **Google API key** and **OpenAI API key**.
- Let's start with Google Api key follow the steps below
    - Sign in to Google AI Studio.
    - Create a new project (if you don't have one).
    - Generate an API key under API Keys.
    - Copy the key and paste it into your .env file.
- Now Open Api key follow the steps below
    - Sign up or log in at https://platform.openai.com/.
    - Go to API Keys in your account dashboard.
    - Click Create new secret key and copy it.
    - Paste it into your .env file.
- After saving the API keys, run the following command in the terminal to see the output:
    - python app.py
