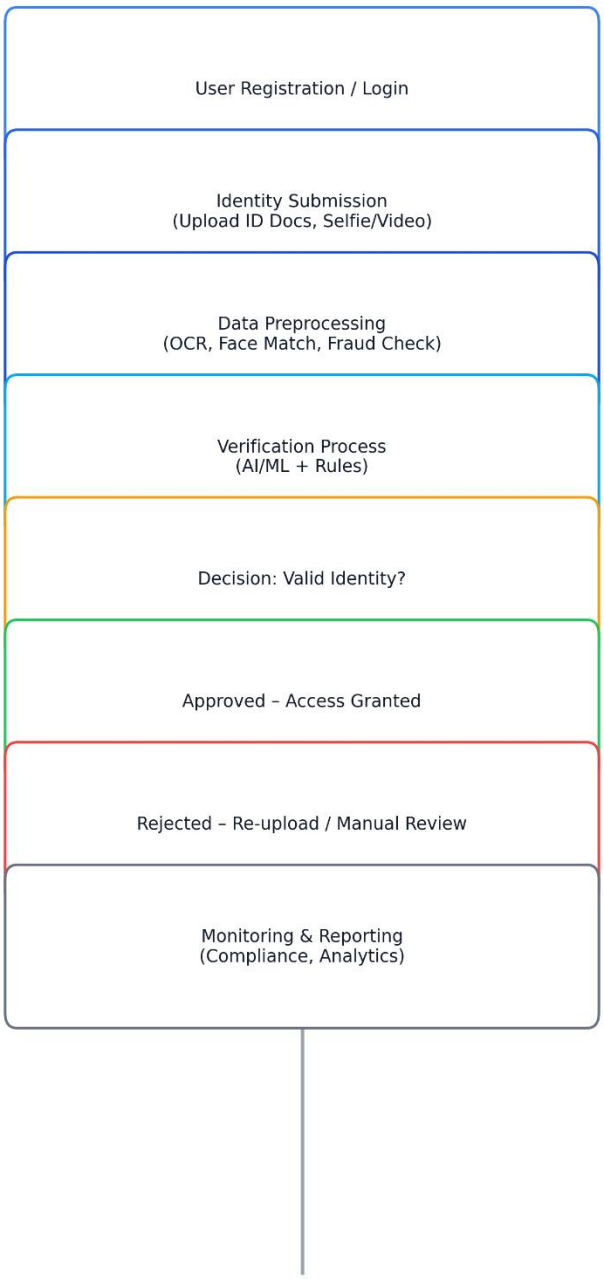
USER WORKFLOW (IDENTIQ)

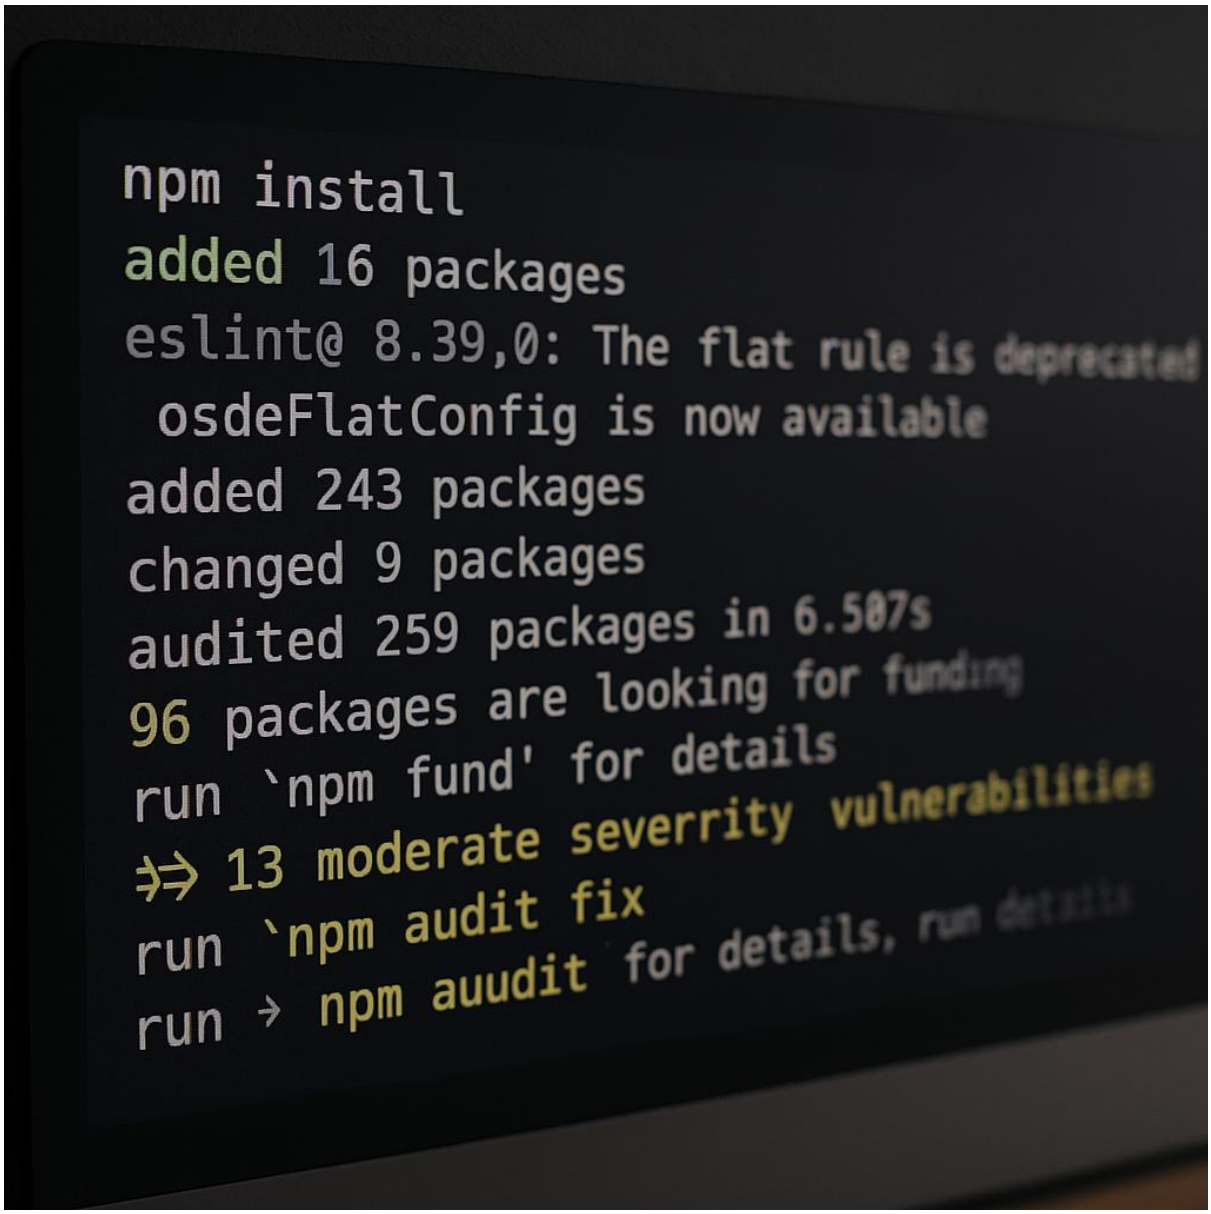
1. **User Registration / Login**
    - New users create accounts (email, phone, or social login).
    - Authentication via password, OTP, or biometrics.
2. **Identity Submission**
    - User uploads documents (Aadhar, PAN, Passport, Driver's License).
    - Selfie / live video capture for biometric matching.
3. **Data Preprocessing**
    - OCR extracts text from documents.
    - Face recognition matches selfie vs ID photo.
    - Fraud checks (duplicate, expired docs, tampering).
4. **Verification Process**
    - AI/ML + Rule-based system verifies authenticity.
    - Decision Point: *Valid Identity?*
        - Yes → Continue.
        - No → Reject & notify user.
5. **Approval & Access**
    - If verified, user is granted access to system / service.
    - If rejected, user is asked to re-upload docs or escalate to manual review.
6. **Monitoring & Reporting**
    - Logs stored for compliance (KYC/AML).
    - Admin dashboard shows verification status & fraud analytics.

IdentiQ – User Workflow (Clean Vertical Boxes)

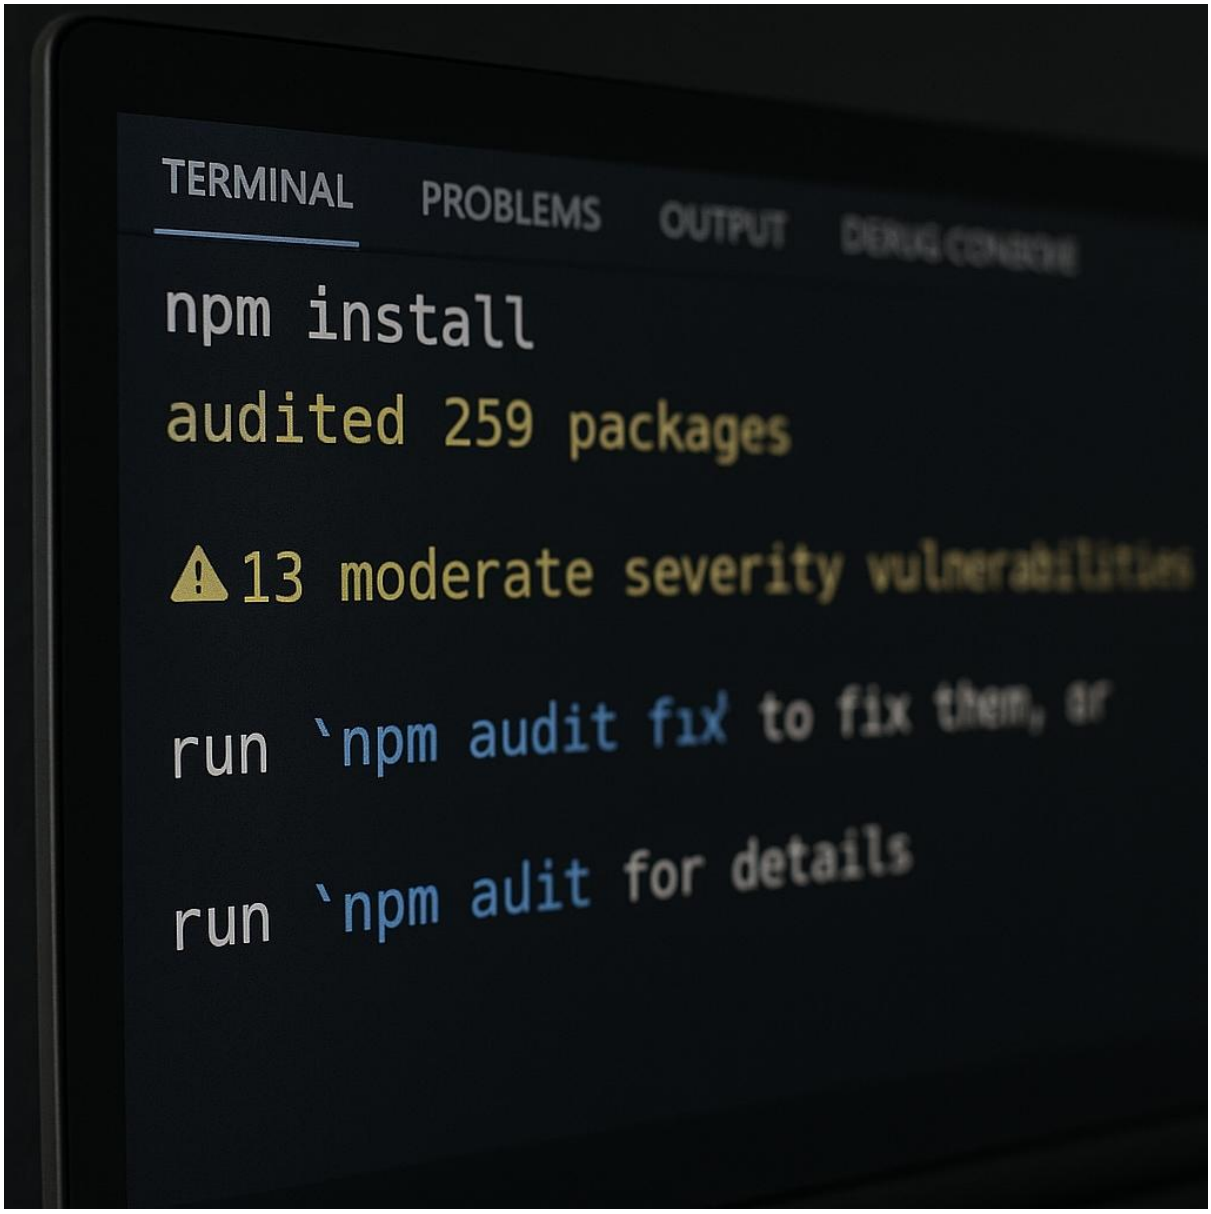


Installations :

- npm install



If the npm installation was not done properly then fix the audit



TERMINAL
PROBLEMS
OUTPUT
npm install
audited 259 packages
13 moderate severity
run `npm audit fix` to fix them, or
run `npm audit for details
