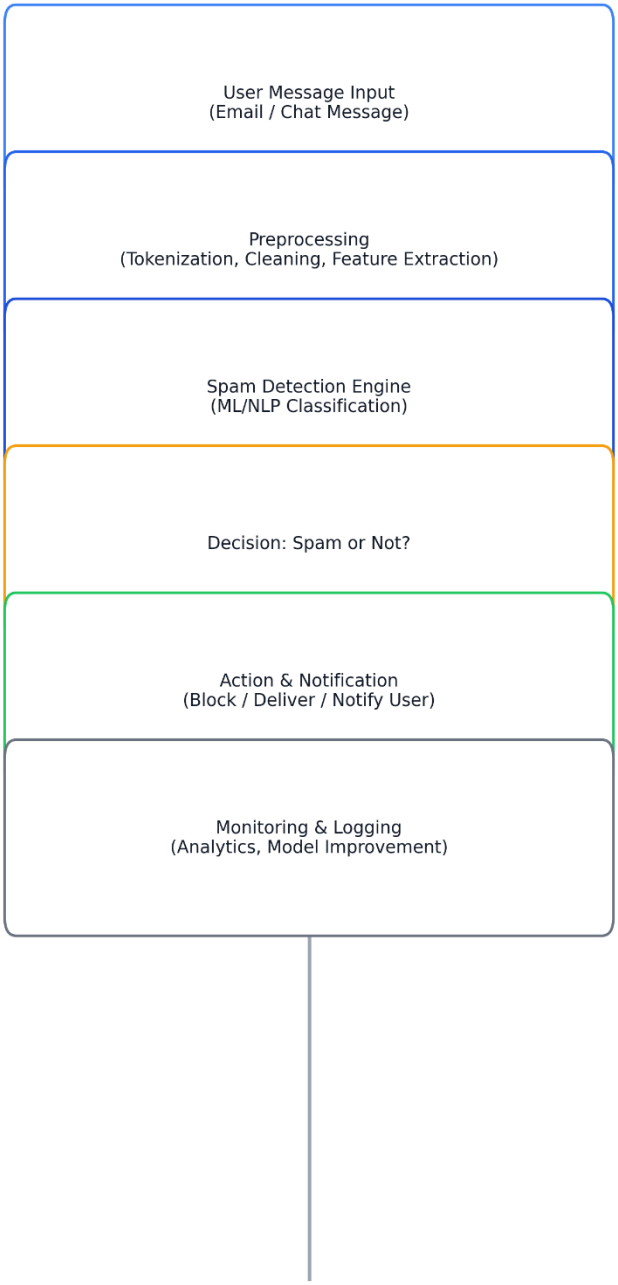
LIKELY USER WORKFLOW (SPAMSHIELDX)

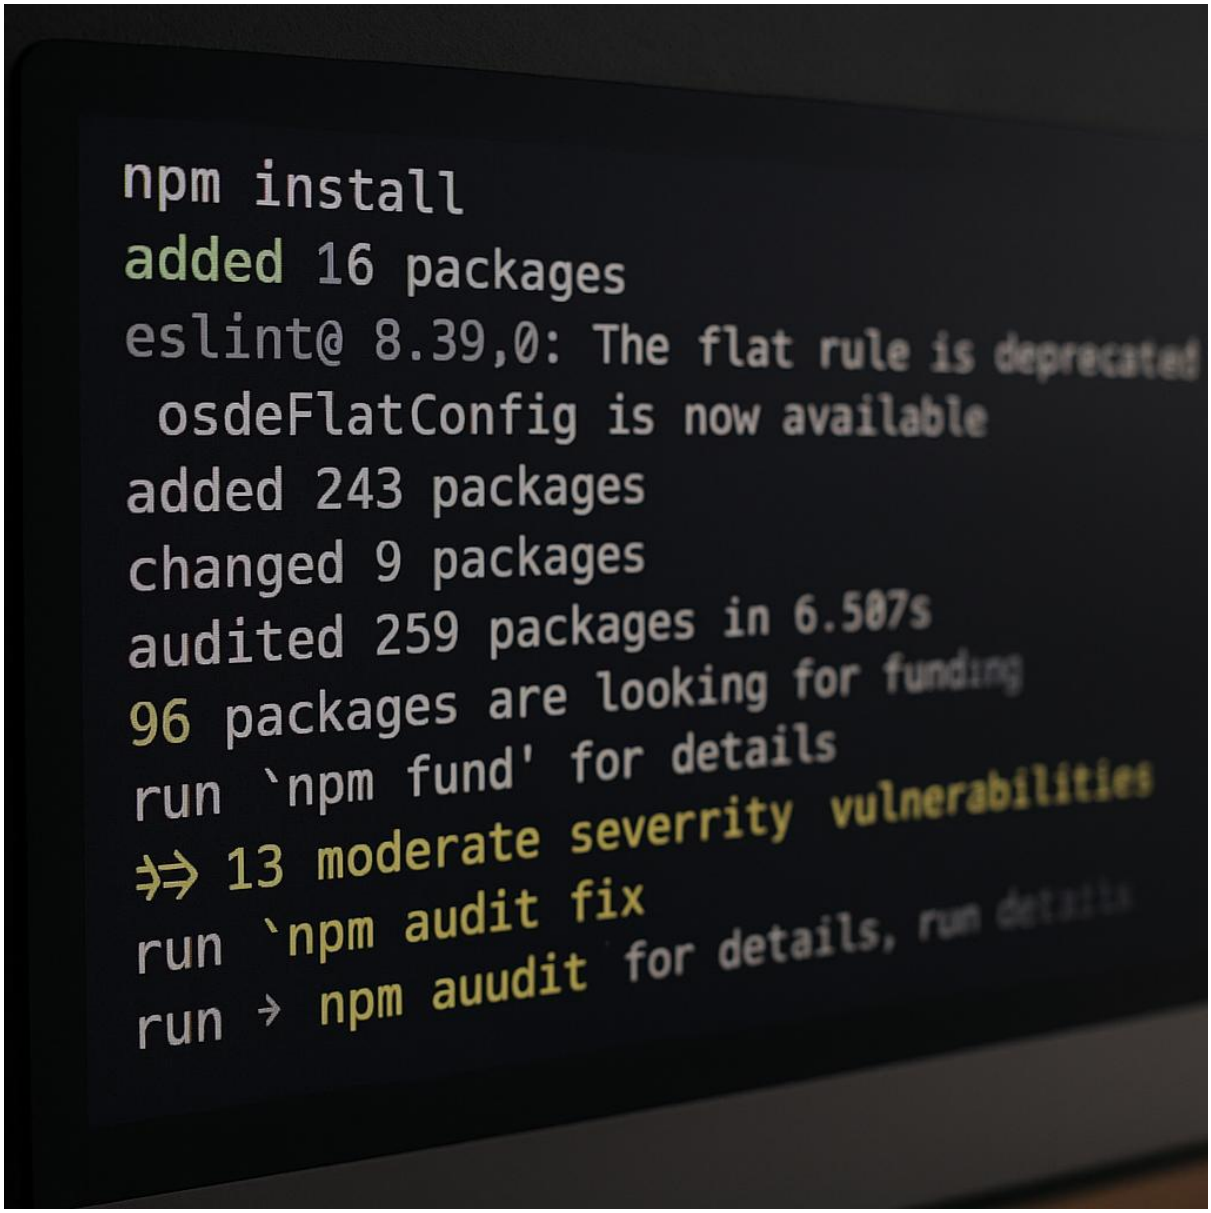
1. **User Message Input**
    - User sends an email / message through the system.
2. **Preprocessing**
    - Tokenization, normalization, stopword removal, feature extraction.
3. **Spam Detection Engine**
    - ML/NLP models (Naive Bayes, Transformer, etc.) classify message.
4. **Decision: Spam or Not?**
    - If spam → mark as spam / block.
    - If not spam → forward message normally.
5. **Action & Notification**
    - Deliver clean message to inbox.
    - Notify user about blocked spam (optional).
6. **Monitoring & Logging**
    - Store results for analytics & improving the model.

SpamShieldX – User Workflow (Clean Vertical Boxes)



Installations :

- npm install



If the npm installation was not done properly then fix the audit
